R.J.Title: Cloning of cong for human tissue-type plasminogen activator and its expr
A.Reference number: A54645; MUID:86284200; PMID:3090401
A.Accession: A54645
A.Molecule type: mRNA
A.Residues: 1-562 AHAR>
A.Molecule type: mRNA
A.Residues: 1-562 AHAR>
A.Molecule parts of this sequence were confirmed by peptide sequencing
R.Reddy, V.B.; Garramone, A.J.; Sasak, H.; Wei, C.

CATALYTIC ACTUINTY: Specific cleavage of Arg-|-Val bond in plasminogen to form plasmin.
-!- GURDINIT: FOUND IN HIGH AND LOW MOLECULAR MASS FORMS. EACH CONSISTS OF TWO CHAINS, A AND B. THE HIGH MOLECULAR MASS FORM CONTAINS A LONG CHAIN A. CLEAVAGE OCCURS AFTER RESIDUE 155 IN THE LOW MOLECULAR MASS FORM TO YIELD A SHOFT AI CHAIN.
-!- PHARMACEUTICAL: Available under the name Abbokinase (Abbott). Used in Pulmonary Embolism (PE) to initiates fibrinolysis.
-!- SIMILARITY: Contains 1 EGF-like domain.
                                                                                                                                                                                                                                                                                                                                                                            VARIANT LEU-141.

-!- CATALYTIC ACTIVITY: Specific cleavage of Arg-|-Val bond in plasminogen to form plasmin.
-!- CATALYTIC ACTIVITY: AND B. THE HIGH MOLECULAR MASS FORMS. EACH CONSISTS OF TWO CHAINS, A AND B. THE HIGH MOLECULAR MASS FORM CONTAINS A LONG CHAIN A. CLEAVAGE OCCURS AFTER RESIDUE 156 IN THE LOW MOLECULAR MASS FORM TO YIELD A SHORT A! CHAIN (BY SIMILARITY).
-!- SIMILARITY: Contains 1 EGF-like domain.
                                                                                                                                                        01-JAN-1988 (Rel. 06, Last sequence update)

PTM: THE SINGLE CHAIN, ALMOST FULLY ACTIVE ENZYME, CAN BE FURTHER RANCESSED INTO A TWO-CHAIN FULLY ACTIVE FORM BY A CLEAVAGE AFTER ARG-308 CATALYZED BY PLASMIN, TISSUE KALLIKREIN OR FACTOR XA.

MISCELLANEONS: BINDS TO THE KRINGLE STRUCTURE OF THE FIBRIN A CHAIN. BINDING TO FIBRIN ENHANCES ITS CATALYTIC ACTIVITY.

SIMILARITY: BELONGS TO PERFITIANSE FAMILY S1.

SIMILARITY: Contains 1 EGF-like domain.

SIMILARITY: Contains 2 kringle domains.

1. FINCTION: CONVERTS THE ABUNDANT, BUT INACTIVE, ZYMOGEN PLASMINOGEN TO PLASMIN BY HYDROLYZING A SINGLE ARG-VAL BOND IN PLASMINOGEN. BY CONTROLLING PLASMIN-MEDIATED PROTECLYSIS, IT PLAYS AN IMPORTANT ROLE IN TISSUE REMODELING AND DEGRADATION, IN CELL MIGRATION AND MANY OTHER PHYSIOPATHOLOGICAL EVENTS.

-:- CATALYTIC ACTIVITY: Specific cleavage of Arg-|-Val bond in
                                                                                                                                                                                                                                                                                                                                                                                                                                                SUBCELLULAR LOCATION: SECRETED; EXTRACELLULAR.

PTM: THE SINGLE CHAIN, ALMOST FULLA ACTIVE BNZYME, CAN BE FURTHER PROCESSED INTO A TWO-CHAIN FULLY ACTIVE FORM BY A CLEAVAGE AFTER ARG-308 CATALYZED BY PLASMIN, TISSUE KALLIKREIN OR FACTOR XA.

RISCELLANDONS: BINDS TO THE KRINGLES STRUCTURE OF THE FIBRIN A CHAIN. BINDING TO FIBRIN ENRANCES ITS CATALYTIC ACTIVITY.

Dairy J. 5:605-617(1995)..

-i. FUNCTION: CONVERTS THE ABUNDANT, BUT INACTIVE, ZYMOGEN PLASMINOGEN PLASMINOGEN PLASMINOGEN BY TO PLASMIN BY HYDROLYZING A SINGLE ARG-VAL BOND IN PLASMINOGEN. BY CONTROLLING PLASMIN-MEDIATED PROTECULYS, IT PLAYS AN IMPORTANT ROLE IN TISSUE REMODELING AND DEGRADATION, IN CELL MIGRATION AND MANY OTHER PHYSIOPATHOLOGICAL EVENTS.

-i. CAPILLYITC ACTIVITY: Specific cleavage of Arg-|-Val bond in plasminogen to form plasmin.

-i. SUBUNIT: HETERODIMER OF CHAIN A AND CHAIN B HELD BY A DISULFIDE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PTM: THE SINGLE CHAIN, ALMOST FULLY ACTIVE ENZYME, CAN BE FURTHER PROCESSED INTO A TWO-CHAIN FULLY ACTIVE FORM BY A CLEAVAGE AFTER AGG-314 CATALLYZED BY PLASMIN, TISSUB KALLIKREIN OR FACTOR XA. MISCELLANEONS: BINDS TO THE KRINGLE STRUCTURE OF THE FIBRIN A CHAIN. BINDING TO PIBRIN ENHANCES ITS CATALYTIC ACTIVITY. SIMILARITY: COLLAID I BGF-like domain. SIMILARITY: Contains I EGF-like domain. SIMILARITY: Contains I fibronectin type I domain. SIMILARITY: Contains I kibronectin type I domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                             Bos taurus (Bovine).

Submitted (FEB-1996) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: ACTIVATES HEPATOCYTE GROWTH FACTOR (HGF) BY
CONVERTING IT FROM A SINGLE CHAIN TO A HETERODIMERIC FORM.
-!- SUBUNIT: DIMER OF A SHORT CHAIN AND A LONG CHAIN LINKED BY
DISULFIDE BOND.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    -!- SUBCELLULAR LOCATION: SECRETED AS AN INACTIVE SINGLE-CHAIN PRECURSOR AND IS THEN ACTIVATED TO A HETERODIMERIC FORM.
-!- TISSUB SPECIFICITY: LIVER.
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY SI.
-!- SIMILARITY: CONTAINS 1 EDF-LIKE domains.
-!- SIMILARITY: CONTAINS 1 fibronectin type I domain.
-!- SIMILARITY: CONTAINS 1 fibronectin type II domain.

"Activation of HGF by endogenous HGF activator is required for
metanephric kidney morphogenesis in vitro.";
Submitted (JAM-2000) to the EMBL/Genbank/DDBA databases.

-i. FUNCTION: ACTIVATES HEAPTOCYTE GROWTH FACTOR (HGF) BY CONVERTING
-i. FUNCTION: DIMER OF A SHORT CHAIN AND A LONG CHAIN LINKED BY A
DISULFIDE BOND (BY SIMILARITY).

-i. SUBCELLULAR LOCATION: SECRETED AS AN INACTIVE SINGLE-CHAIN
PRECURSOR AND IS THEN ACTIVATED TO A HETERODIMERIC FORM (BY
THITTALINA.)
                                                                                                                                                                                                             0; Gaps

Rambara T., Okabe H.;

"Primary structure of guinea-pig Hageman factor: sequence around the classage stre differs from the human molecule.";

Biochim. Biophys. Acra 1159:113-121(1992).

-I- FUNCTION: PACTOR XII IS A SERUM GLYCOPROTEIN THAT PARTICIPATES IN THE INTITATION OF BRADYKININ AND ANGIOTENSIN.

-I- FUNCTION: PACTOR XII Cleaves selectively Arg-|-1le bonds in factor THI INTITATION OF BRADYKININ AND ANGIOTENSIN.

-I- CATALYTIC ACTIVITY: Cleaves selectively Arg-|-1le bonds in factor VII to form factor VII and factor XII to form factor XII.

-I- MISCELLANBOUS: FACTOR XII, PREKALLIKRRIN, AND HWM KINNOGEN FORM A COMPLEX BOUND TO AN ANIONIC SURFACE. PREKALLIKRRIN IS CLEAVED FOR TO ALPHA-FACTOR XII.

-I- SIMILARITY: BELONGS TO PEPTIDASE FAMILY SI.

-I- SIMILARITY: Contains 1 fibronectin type II domain.

-I- SIMILARITY: Contains 2 EGF-like domain.

DISEASE: DEFECTS IN F12 DO NOT CAUSE ANY CLINICAL SYMPTOMS. THE SOLE EFFECT IS THAT WHOLE-BLOOD CLOTTING TIME IS PROLONGED.

MISCELLANEOUS: FACTOR XII. PREKALLIKREIN, AND HWW KININOGEN FORM A COMPLEX BOUND TO AN ANIONIC SUFFACE. PREKALLIKREIN IS CLEAVED BY FACTOR XII TO FORM KALLIKREIN, WHICH THEN CLEAVES FACTOR XII FIRST TO ALPHA-FACTOR XIIA AND THEN TO BETA-FACTOR XIIA. ALPHA-FACTOR XIIA AND THEN TO BETA-FACTOR XIIA. ALPHA-FACTOR XIIA. SIMILARITY: CONTAINS 2 EGF-like domains.

SIMILARITY: Contains 2 EGF-like domains.
SIMILARITY: Contains 1 fibronectin type I domain.
SIMILARITY: Contains 1 fibronectin type II domain.
SIMILARITY: Contains 1 kringle domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MEDLINE-99290785; PubMed=10361128;

Chem. 264:5957-5965(1989).

- FUNCTION: Apo(a) is the main constituent of lipoprotein(a) (Lp(a)). It has serine proteinase activity and is able of autoproteolysis. Inhibits tissue-type plasminogen activator 1. Lp(a) may be a ligand for megalin/dp 330.

SUBUNIT: Disulfide-linked to apo-B100. Binds to fibronectin and

C.:- TISSUE SPECIFICITY: In the adult, widely expression is first detected on day and increases up to day 18. Lower levels are found in adult. At 9.5 dpc. expression is localised to the apical ectodermal ridge (ARR) of the developing fore and hindlindb buds, the telencephalon and the first brachial arch. At 10.5 dpc.

EXPRESSION is also observed in the myotome and in sensory tissues such as the nasal pit and optic vesicle.

C.:- SIMILARITY: Contains 1 kNSC domain.

-!- FUNCTION: Receptor for Dickkopf protein. Cooperates with Dickkopf to block Wnt/beta-catenin signaling (By similarity).
-!- SUBCELLULAR LOCATION: Type I membrane protein (Potential).
-!- SIMILARITY: Contains 1 CUB domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     4; Gaps
